Caminalcules are imaginary animals invented by the evolutionary biologist Joseph Camin. In this lab exercise you will construct an evolutionary tree of the Caminalcules using both the "living" species and the additional 57 "fossil" species. This illustrates how modern classification schemes attempt to reflect evolutionary history.

CLASSIFICATION AND EVOLUTION

1. Answers will vary with how closely the students' trees agree with the key. Students should compare their original classification of the living Caminalcules and see if their genera share a common ancestor. If not, they will need to rename their living species or revise their tree. 2.
